An Introduction to Computational Science Allen Holder,Joseph Eichholz,2019-06-18 This textbook provides an introduction to the growing interdisciplinary field of computational science It combines a foundational development of numerical methods with a variety of illustrative applications spread across numerous areas of science and engineering The intended audience is the undergraduate who has completed introductory coursework in mathematics and computer science Students gain computational acuity by authoring their own numerical routines and by practicing with numerical methods as they solve computational models This education encourages students to learn the importance of answering How expensive is a calculation how trustworthy is a calculation and how might we model a problem to apply a desired numerical method The text is written in two parts Part I provides a succinct one term inauguration into the primary routines on which a further study of computational science rests The material is organized so that the transition to computational science from coursework in calculus differential equations and linear algebra is natural Beyond the mathematical and computational content of Part I students gain proficiency with elemental programming constructs and visualization which are presented in MATLAB syntax The focus of Part II is modeling wherein students build computational models compute solutions and report their findings The models purposely intersect numerous areas of science and engineering to demonstrate the pervasive role played by computational science Multi-Chaos, Fractal and Multi-Fractional Artificial Intelligence of Different Complex Systems Yeliz Karaca,Dumitru Baleanu,Yu-Dong Zhang,Osvaldo Gervasi,Majaz Moonis,2022-06-22 Multi Chaos Fractal and Multi Fractional Artificial Intelligence of Different Complex Systems addresses different uncertain processes inherent in the complex systems attempting to provide global and robust optimized solutions distinctively through multifarious methods technical analyses modeling optimization processes numerical simulations case studies as well as applications including theoretical aspects of complexity Foregrounding Multi chaos Fractal and Multi fractional in the era of Artificial Intelligence AI the edited book deals with multi chaos fractal multifractional fractional calculus fractional operators quantum wavelet entropy based applications artificial intelligence mathematics informed and data driven processes aside from the means of modelling and simulations for the solution of multifaceted problems characterized by nonlinearity non regularity and self similarity frequently encountered in different complex systems The fundamental interacting components underlying complexity complexity thinking processes and theory along with computational processes and technologies with machine
