Verification and Validation Procedure for Computational Fluid Dynamics Solutions Michael P. Ebert, Joseph J. Gorski, 2001 This report presents the mechanics of performing a verification and validation analysis for practical problems focusing mainly on the estimation of uncertainty in the numerical prediction due to the use of finite grid sizes A detailed example is presented along with discussions regarding many of the practical issues involved in performing a rigorous verification and validation analysis The particular approach outlined in this report is mainly based on theoretical work performed at the Iowa Institute of Hydraulic Research This approach requires numerical solutions on 3 related grids however an alternative approach requiring solutions on only 2 grids is also demonstrated **Computational Fluid Dynamics** John
