markets      *Telecommunications Research Resources* James K. Bracken, Christopher H. Sterling, 2021-12-16 As the telecommunication and information field expands and becomes more varied so do publications about these technologies and industries This book is a first attempt to provide a general guide to that wealth of English language publications both books and periodicals on all aspects of telecommunication It is a comprehensive evaluative sourcebook for telecommunications research in the United States that brings together a topically arranged cross referenced and indexed volume in one place The information provided is only available by consulting a succession of different directories guides bibliographies yearbooks and other resources On the one hand it is a directory that describes in detail the major entities that comprise the American telecommunication research infrastructure including federal and state government offices and agencies and private public and corporate research institutions On the other hand it is a bibliography that identifies and assesses the most important and useful reference and critical resources about U S telecommunication history technology industry and economics social applications and impacts plus policy law and regulations and role in the global telecommunication marketplace No existing guide covers all of these aspects in the depth and detail of this volume      **Robust Control of Diesel Ship Propulsion**

Nikolaos Xiros, 2012-12-06 This book covers a number of models and control types An integrated nonlinear state space model of the marine propulsion system is developed This is based upon physical principles that incorporate uncertainties arising from engine thermodynamics and disturbances arising from propeller hydrodynamics The model employs artificial neural networks to depict the nonlinearities of the thermochemical processes of engine power torque generation and the engine turbocharger dynamical interaction neural nets combine the required mathematical flexibility and formalism with numerical training and calibration options using either thermodynamic engine models or measured data series The neural state space model is decomposed appropriately to provide a linearised perturbation model suitable for controller synthesis The proportional integral derivative control law is examined under the perspective of shaft speed regulation for enhanced disturbance rejection of the propeller load The typical marine shafting system dynamics and configuration allow for a smart implementation of the D term on shaft torque feedback Full state feedback control is examined for increased robustness of the compensated plant against parametric uncertainty and neglected dynamics The H requirements on the closed loop transfer matrix are appropriately decomposed to similar ones on scalar transfer functions which give specifications that are easier to manipulate In effect the methods are comparatively assessed and suggestions and practical applications are given This synthetic approach to propulsion plant control and operational problems should prove useful for both theoreticians and practitioners and can be easily adopted for the control of other processes or systems outside the marine field as well
