

CompTIA® Security+™ Certification

Exam SY0-301

- A** **Security zones**
Break, staff, and control for using firewalls and routers at the network's edge. Security zones, which include DMZs, extranets, and intranets, permit secure communications between an organization and third parties.
- B** **DMZ**
Be aware that a computer can't access the Internet, FTP, and DNS servers connected to the public. The DMZ is also a logical location in which to place a RADIUS server, providing on-demand network access to the Internet. If an attacker gains access to the RADIUS server, he or she could gain access to the Internet network without being authenticated to the Internet threat.
- C** **Firewall**
A barrier that isolates one network from another. Its main function is to protect an internal network from unauthorized access via an external public network. The firewall can be a dedicated physical device or a software feature coded to a router, switch, or similar device.
- D** **Router**
A network management device that sits between different network segments and routes traffic from one network to another. When packet filtering is coded to a router's functionality, the router can take on the additional role of digital traffic cop.
- E** **Bastion host**
A computer that resides in a DMZ and hosts Web, mail, DNS, and/or FTP servers. To increase security, you should restrict all unnecessary programs, services, and protocols and disable all unnecessary network ports on the bastion host.
- F** **Remote network access server**
A server that provides remote authentication services for clients who are using dial-in, VPN, or access server connections. This can be a RADIUS or TACACS+ server.

structure Part IV Security in Transmissions This part discusses communications security This is an important aspect of security because for years now we have connected our computers together into a vast array of networks Various protocols in use today that the security practitioner needs to be aware of are discussed in this part Part V Operational Security This part addresses operational and organizational issues This is where we depart from a discussion of technology again and will instead discuss how security is accomplished in an organization Because we know that we will not be absolutely successful in our security efforts attackers are always finding new holes and ways around our security defenses one of the most important topics we will address is the subject of security incident response and recovery Also included is a discussion of change management addressing the subject we alluded to earlier when addressing the problems with patch management security awareness and training incident response and forensics Part VI Appendixes There are two appendixes in CompTIA Security All in One Exam Guide Appendix A provides an additional in depth explanation of the OSI model and Internet protocols should this information be new to you and Appendix B explains how best to use the CD ROM included with this book Glossary Located just before the index you will find a useful glossary of security terminology including many related acronyms and their meanings We hope that you use the glossary frequently and find it to be a useful study aid as you work your way through the various topics in this exam guide
