Computational Models in Political Economy Ken Kollman, John H. Miller, Scott E. Page, 2003 The use of innovative computational models in political economic research as a complement to traditional analytical methodologies *Handbook of Computational Economics* Leigh Tesfatsion, Kenneth L. Judd, 2006-05-15 The explosive growth in computational power over the past several decades offers new tools and opportunities for economists This handbook volume surveys recent research on Agent based Computational Economics ACE the computational study of economic processes modeled as dynamic systems of interacting agents Empirical referents for agents in ACE models can range from individuals or social groups with learning capabilities to physical world features with no cognitive function Topics covered include learning empirical validation network economics social dynamics financial markets innovation and technological change organizations market design automated markets and trading agents political economy social ecological systems computational laboratory development and general methodological issues Every volume contains contributions from leading researchers Each Handbook presents an accurate self contained survey of a particular topic The series provides comprehensive and accessible surveys The Oxford Handbook of Political Methodology Janet M. Box-Steffensmeier, Henry E. Brady, David Collier, 2008 Political methodology has changed dramatically over the past thirty years and many new methods and techniques have been developed Both the Political Methodology Society and the Qualitative Multi Methods Section of the American Political Science Association have engaged in ongoing research and training programs that have advanced quantitative and qualitative methodology The Oxford Handbook of Political Methodology presents and synthesizes these developments The Handbook provides comprehensive overviews of diverse methodological approaches with an emphasis on three major themes First specific methodological tools should be at the service of improved conceptualization comprehension of meaning measurement and data collection They should increase analysts leverage in reasoning about causal relationships and evaluating them empirically by contributing to powerful research designs Second the authors explore the many different ways of addressing these tasks through case studies and large n designs with both quantitative and qualitative data and via techniques ranging from statistical modelling to process tracing Finally techniques can cut across traditional methodological boundaries and can be useful for many different kinds of researchers Many of the authors thus explore how their methods can inform and be used by scholars engaged in diverse branches of methodology **The Oxford Handbook of Philosophy of Social Science** Harold Kincaid, 2012-07-09 The philosophy of the social sciences considers the underlying explanatory powers of the social or human sciences such as history economics anthropology politics and sociology The type of questions covered includes the methodological the nature of observations laws theories and explanations to the ontological whether or not these sciences can explain human nature in a way consistent with common sense beliefs This Handbook is a major comprehensive look at the key ideas in the field is guided by several principles The first is that the philosophy of social

science should be closely connected to and informed by developments in the sciences themselves The second is that the volume should appeal to practicing social scientists as well as philosophers with the contributors being both drawn from both ranks and speaking to ongoing controversial issues in the field Finally the volume promotes connections across the social sciences with greater internal discussion and interaction across disciplinary boundaries

Revisiting Hayek's Political Economy Peter J. Boettke, Virgil Henry Storr, 2016-12-08 Volume 21 of Advances in Austrian Economics exemplifies this focus by highlighting key research from the Austrian tradition of economics with other research traditions in economics and related areas

Philosophical Transactions of the Royal Society of London, 2007 Routledge Handbook of Evolutionary Economics Kurt Dopfer, Richard R Nelson, Jason Potts, Andreas Pyka, 2023-11-27 While dating from post Classical economists such as Thorstein Veblen and Joseph Schumpeter the inception of the modern field of evolutionary economics is usually dated to the early 1980s Broadly speaking evolutionary economics sees the economy as undergoing continual evolutionary change Evolutionary change indicates that these changes were not planned but rather were the result of innovations and selection processes These often involved winners and losers but most

importantly they resulted in actors learning what was and was not working Evolutionary economics in contrast to mainstream economics emphasises the relevance of variables such as technology institutions decision rules routines or consumer preferences for explaining the complex evolutionary changes in the economy In so doing evolutionary economics significantly broadens the scope of economic analysis and sheds new light on key concepts and issues of the discipline This handbook draws on a stellar cast list of international contributors ranging from the founders of the field to the newest voices The volume explores the current state of the art in the field of evolutionary economics at the levels of the micro e g firms and households meso e g industries and institutions and macro e g economic policy structure and growth Overall the Routledge Handbook of Evolutionary Economics provides an excellent overview of current trends and issues in this rapidly developing field

Computing Stochastic Dynamic Economic Models with a Large Number of State Variables Benjamin Malin, 2007 We describe a sparse grid collocation algorithm to compute recursive solutions of dynamic economies with a sizable number of state variables We show how powerful this method may be in applications by computing the nonlinear recursive solution of an international real business cycle model with a substantial number of countries complete insurance markets and frictions that impede frictionless international capital flows In this economy the aggregate state vector includes the distribution of world capital across different countries as well as the exogenous country specific technology shocks We use the algorithm to efficiently solve models with 2 4 and 6 countries i e up to 12 continuous state variables
