Impedance Spectroscopy Mohammad A. Alim, 2017-12-27

This book emphasizes the use of four complex plane formalisms impedance admittance complex capacitance and modulus in a simultaneous fashion

The purpose of employing these complex planes for handling semicircular relaxation using a single set of measured impedance data at small signal electrical data is highly underscored

The current literature demonstrates the importance of template version of impedance plot whereas this book reflects the advantage of using concurrent four complex plane plots for the same data

This approach allows extraction of a meaningful equivalent circuit model attributing to possible interpretations via potential polarizations and operative mechanisms for the investigated material system

Thus this book supersedes the limitations of the impedance plot and intends to serve a broader community of scientific and technical professionals better for their solid and liquid systems

This book addresses the following highlighted contents for the measured data but not limited to the 1 Lumped Parameter Complex Plane Analysis LP CPA in conjunction with the Bode plots 2 Equivalent circuit model ECM derived from the LP CPA 3 Underlying Operative Mechanisms along with the possible interpretations 4 Ideal Debye and non ideal non Debye relaxations and 5 Data Handling Criteria DHC using Complex Nonlinear Least Squares CNLS fitting procedures

On Vision and Being Human: Exploring the Menstrual, Neurological and Symbolic Origins of Religious Experience Bruce Rimell, 2015-07

Visionary and religious experiences are ubiquitous among human beings but why do we experience them as coming from a hidden reality beyond the senses

Why should we believe in the existence of deities despite the mundane evidence of our own eyes

Why do we as intelligent primates ascribe any importance to these imaginary realities at all

This creative and speculative thesis seeks to answer these questions in a new way gazing into the content of visions themselves and exploring the various inner realities that gave rise to these transformative and meaningful aspects of our humanity

Focusing upon symbolic cognition as a fundamental organising principle of human experience a diverse series of musings upon the nature of reality consciousness and our evolutionary origins seeks to transcend our modern artificial boundaries to arrive at a holistic and delightfully playful human image for the twenty first century

An original visionary thesis illustrated with 30 beautiful drawings
