**Uses and Misuses of International Economic Law** Moritz J. K. Blenk, 2022-09-12 Standardization is a classic form of rulemaking Nonetheless it is notoriously diffuse and gives rise to questions and debate in particular over the standards normativity legitimacy and nature whether public or private national or international Moritz J K Blenk applies a policy orientated approach to international law to comparatively analyze the role of private rulemaking within the context of international economic integration in the World Trade Organization and the European Union He thereby aims to elucidate the opaque phenomenon of private standardization from a legal perspective and more profoundly shed new light on economic integration

**Chinese Way, The: Overcoming Challenges For A Shared Future** Fabio Massimo Parenti, 2023-07-07 The book aims to communicate to readers in a clear fluent and well documented fashion the new role that China plays in the geography of world power evaluating its weight

influence and impact on future developments China's ambition and its vision of international affairs can be summed up in Beijing's desire to build a community of common destiny for mankind Behind this concept lies the desire to present itself as a peaceful nation interested in a common global development in full compliance with the principles embraced by the United Nations to be achieved through win-win relationships capable of bringing mutual benefits to the actors engaged in international cooperation China has experienced extraordinary growth in recent decades and intends to continue carving out the space it deserves in various international fora According to the author this does not necessarily represent a threat as its Western detractors contend given the People's Republic's intention to achieve its goals through mutual respect spatial interconnection and long-term productive investments The book has been published in Italy by Meltemi and is in course of publication by the Chinese publisher New Star Press Those who deal with China are well aware that the West's gaze on the People's Republic has often been dismissive superficial and distorted A sort of festival of stereotyped opinions with value judgments constantly used to highlight the West's alleged superiority vis-à-vis the Chinese model Regardless of whether one likes the Chinese political economic system or not no country can avoid engaging with it Especially if we consider that the exhaustion of the propulsive thrust of Western globalization is increasingly evident and corresponds conversely to the rise of a new constructive globalization with Chinese characteristics Fabio Massimo Parenti Youtube Author's commentary [The Future Is Asian](#) Parag Khanna, 2019-02-05 In the 19th century the world was Europeanized In the 20th century it was Americanized Now in the 21st century the world is being Asianized The Asian Century is even bigger than you think Far greater than just China the new Asian system taking shape is a multi-civilizational order spanning Saudi Arabia to Japan Russia to Australia Turkey to Indonesia linking five billion people through trade finance infrastructure and diplomatic networks that together represent 40 percent of global GDP China has taken a lead in building the new Silk Roads across Asia but it will not lead it alone Rather Asia is rapidly returning to the centuries-old patterns of commerce conflict and cultural exchange that thrived long before European colonialism and American dominance Asians will determine their own future and as they collectively assert their interests around the world they will determine ours as well There is no more important region of the world for us to better understand than Asia and thus we cannot afford to keep getting Asia so wrong Asia's complexity has led to common misdiagnoses Western thinking on Asia conflates the entire region with China predicts imminent World War III around every corner and regularly forecasts debt-driven collapse for the region's major economies But in reality the region is experiencing a confident new wave of growth led by younger societies from India to the Philippines nationalist leaders have put aside territorial disputes in favor of integration and today's infrastructure investments are the platform for the next generation of digital innovation If the nineteenth century featured the Europeanization of the world and the twentieth century its Americanization then the twenty-first century is the time of Asianization From investment portfolios and trade wars to Hollywood movies and university admissions no aspect of life is immune from Asianization With America's tech

sector dependent on Asian talent and politicians praising Asia's glittering cities and efficient governments Asia is permanently in our nation's consciousness We know this will be the Asian century Now we finally have an accurate picture of what it will look like *Inventing Future Cities* Michael Batty, 2018-12-11 How we can invent but not predict the future of cities We cannot predict future cities but we can invent them Cities are largely unpredictable because they are complex systems that are more like organisms than machines Neither the laws of economics nor the laws of mechanics apply cities are the product of countless individual and collective decisions that do not conform to any grand plan They are the product of our inventions they evolve In *Inventing Future Cities* Michael Batty explores what we need to understand about cities in order to invent their future Batty outlines certain themes principles that apply to all cities He investigates not the invention of artifacts but inventive processes Today form is becoming ever more divorced from function information networks now shape the traditional functions of cities as places of exchange and innovation By the end of this century most of the world's population will live in cities large or small sometimes contiguous and always connected in an urbanized world it will be increasingly difficult to define a city by its physical boundaries Batty discusses the coming great transition from a world with few cities to a world of all cities argues that future cities will be defined as clusters in a hierarchy describes the future high frequency real time streaming city considers urban sprawl and urban renewal and maps the waves of technological change which grow ever more intense and lead to continuous innovation an unending process of creative destruction out of which future cities will emerge

**The Future of the Occupation of the Palestinian Territories after Gaza** Erwin van Veen, 2025-08-19 This open access book outlines four scenarios for the future of Israeli occupation of the Palestinian Territories as a broad canvas on which the interests roles and perspectives of the key stakeholders involved in occupation are subsequently painted An indirect result of 58 years of Israeli occupation of the Palestinian Territories the Hamas attack on Israel of 7 October 2023 and the ensuing Israeli military campaign have greatly worsened Palestinian security in the short term and Israeli security in the long term Durable prospects for achieving reconciliation and peace are now shrouded in uncertainty as political forces and views on both sides are likely to polarize and radicalize even further October 7 and its aftermath have also introduced new uncertainties about the future nature of Israeli annexation and the modalities as well as extent of Palestinian resistance Old frames have lost much of their validity such as the Oslo agreements or even the logic underpinning security cooperation between the Palestinian Authority and the Israeli military The book aims to improve our understanding of the post October 7 context of occupation and the initiatives required to end it in the future Ultimately the book's intention is to shake up complacent policies and debates about the occupation of the Palestinian Territories by providing a more realistic basis for both reflection and action While short form analysis e.g. blogs essays and briefs of October 7 and the ensuing events have proliferated there has been little to no comprehensive analysis of the significance of these events for the future of occupation Using the method of scenario planning to develop an analytical baseline the added value

of this book is that it offers a multi dimensional consideration of this question both through the range of stakeholders it covers and the variety of its authors with respect to their research focus and perspective      The Lost Future Jan Zielonka,2023-01-01 A timely and compelling argument for a revitalized and restructured global politics The future seems increasingly uncertain Our democracies are failing to prevent financial crises energy shortages climate change and war so how can we look to the future with confidence Jan Zielonka argues that it is democracy s shortsightedness that makes politics stumble in our increasingly connected world With our governments still confined to the borders of nation states defending the short term interests of present day voters the consequences for future generations are dire In this incisive account Zielonka makes a bold case for a new politics of time and space He considers how democracy should adjust to the world of high speed and he questions our everyday experiences as citizens Is it acceptable for authorities and firms to monitor our whereabouts Why is the distribution of time and space so unequal And most crucially can we construct a new system of governance that will allow us to plan ahead with certainty      *Securing Our Future* Ola Dahlman,2025-05-28 In an era marked by escalating global crises climate change cyber threats pandemics and nuclear weapons proliferation this book introduces a science based approach to security and global threats It underscores the necessity of interdisciplinary science and technology to ensure that decisions and actions are grounded in knowledge This vision seeks to inspire promote and facilitate collaboration across all sectors of global society Building resilient societies and effectively addressing global threats will require substantial resources Can we afford to save the Earth Can we afford not to Four Key Elements A Science Based Approach to Security and Global Threats The book is structured around two key chapters an opening chapter that outlines this new vision and a concluding chapter that reflects on how to translate that vision into actionable steps Evolution of Earth and Society A review of the development of our planet leading to modern society with a discussion on global demography and the economy critical components of global security and resilience Key Global Communities An introduction to five global communities states cities the business and scientific communities and civil society It examines how each can contribute to building security and assesses their vulnerabilities to various threats Major Human Created Threats A discussion of five large scale threats created by human activity or arising from human interaction with nature global warming natural disasters biopandemics nuclear weapons and cyber threats This book serves as a call for informed collaborative action to address the pressing global challenges of our time      Social Sciences Research Journal ,2016      **States and Societies in Motion** Boo Teik Khoo,Jafar Suryomenggolo,2021 With contributions from leading scholars in their field this collection of fourteen essays offers wide ranging but incisive perspectives on East and Southeast Asian Studies Apart from informing and enlightening the reader the essays offer a tribute to Professor Takashi Shiraishi the renowned Japanese scholar for his many contributions across continents and disciplines as well as his personal qualities as a long time colleague teacher and friend Now Professor Emeritus of the National Graduate Institute for Policy Studies GRIPS in Tokyo Shiraishi sensei has had an outstanding career

as a teacher scholar administrator and policy advisor his many roles including Director of the Southeast Asia Program at Cornell University and president both of GRIPS and the Institute of Developing Economies Japan Often with Japan at their nexus the essays speak to three enduring themes in the research interests that spanned Shiraishi's half century career namely political movements in Southeast Asia national and regional politics in China and Japan and the links between ideology networks and policies at critical junctures of state formation An introduction by the editors reviews Shiraishi's contributions to many areas of scholarship these are documented in the back matter in a bibliography of his publications and writings in English and Japanese Among authors of the fourteen essays that follow are Patricio Abinales Chris Baker Caroline Hau Peter Katzenstein Pasuk Phongpaichit and Thongchai Winichakul In a concluding lengthy interview Shiraishi speaks for the first time in a frank if light hearted tone of his diverse experiences in academia as student faculty and administrator his thoughts on area studies and their connections with official policy making and his initiatives for building regional networks of research and intellectual exchange A festschrift in English being a rarity for a Japanese scholar this collection offers valuable if indirect insights into the links and influences that have animated a burgeoning community of international academic exchange and expert cooperation This has been facilitated by Shiraishi's position time and again even if an accidental one as he likes to say as a transnational intersection point for colleagues students and friends in their many various research pursuits A rich and rewarding collection

**Move** Parag Khanna, 2021-10-12 A Financial Times Best Book of the Year A provocative Booklist and compelling look at the powerful global forces that will cause billions of us to move geographically over the next decades ushering in an era of radical change In the 60 000 years since people began colonizing the continents a recurring feature of human civilization has been mobility the ever constant search for resources and stability Seismic global events wars and genocides revolutions and pandemics have only accelerated the process The map of humanity isn't settled not now not ever As climate change tips toward full blown crisis economies collapse governments destabilize and technology disrupts we're entering a new age of mass migrations one that will scatter both the dispossessed and the well off Which areas will people abandon and where will they resettle Which countries will accept or reject them As today's world population which includes four billion restless youth votes with their feet what map of human geography will emerge In *Move* celebrated futurist Parag Khanna provides an illuminating and authoritative vision of the next phase of human civilization one that is both mobile and sustainable As the book explores in the years ahead people will move people to where the resources are and technologies will flow to the people who need them returning us to our nomadic roots while building more secure habitats An urgent powerful argument for more open international borders Kirkus Reviews starred review *Move* is a fascinating look at the deep trends that are shaping the most likely scenarios for the future Most important it guides each of us as we determine our optimal location on humanity's ever changing map

Parag Khanna, 2017-01-10 American democracy just isn't good enough anymore. A costly election has done more to divide American society than unite it while trust in government and democracy itself is plummeting. But there are better systems out there and America would be wise to learn from them. In this provocative manifesto, globalization scholar Parag Khanna tours cutting edge nations from Switzerland to Singapore to reveal the inner workings that allow them to lead the way in managing the volatility of a fast changing world while delivering superior welfare and prosperity for their citizens. The ideal form of government for the complex 21st century is what Khanna calls a direct technocracy, one led by experts but perpetually consulting the people through a combination of democracy and data. From a seven member presidency and a restructured cabinet to replacing the Senate with an Assembly of Governors, Technocracy in America is full of sensible proposals that have been proven to work in the world's most successful societies. Americans have a choice for whom they elect president but they should not wait any longer to redesign their political system following Khanna's pragmatic vision.

Connectography Parag Khanna, 2016-09-29T00:00:00+02:00 Dalla sua città di residenza Singapore il famoso stratega geopolitico indiano Parag Khanna si è spostato verso le mete più disparate: dall'Ucraina all'Iran, dalle miniere della Mongolia a Nairobi, dalle coste atlantiche al circolo polare artico. Grazie ai suoi viaggi ha avuto modo di osservare i mutamenti epocali che stanno investendo il mondo: Migrazioni, megalopoli, Zone Economiche Speciali, comunicazioni e cambiamenti climatici stanno ridisegnando la geografia planetaria. Gli Stati non sono più definiti dai loro confini bensì dai flussi di persone e di legami finanziari, commerciali ed energetici che quotidianamente li attraversano. In questo scenario anche lo scontro fra potenze assume nuove forme trasformandosi in un forsennato tiro alla fune: gli eserciti vengono usati tanto per difendere i territori quanto le risorse e le infrastrutture che vi sono custodite. Sono i prodromi della definitiva scomparsa delle guerre.

Connectography che chiude la trilogia di cui *I tre imperi* e *Come si governa il mondo* sono i primi due volumi, una mappa dettagliatissima che non solo ci offre una lucida analisi del presente ma ci propone una visione molto ottimistica del futuro che ci attende: un mondo in cui le linee che lo connettono sono molte di più di quelle che lo separano. A chi teme che il mondo stia diventando sempre più chiuso, Connectography offre una nuova prospettiva più ottimistica.

*The Economist*: La lungimiranza e l'erudizione di Parag Khanna sono impareggiabili. Il futuro presidente degli Stati Uniti farebbe bene a leggere questo libro.

Chuck Hagel, ex segretario della Difesa USA: Si tratta forse del libro più globale mai scritto, specifico in maniera impressionante mantenendo l'analisi su ampia scala. Se le infrastrutture determinano il destino del mondo, allora per capire dove il futuro dirige il suo corso basta seguire le reti delle supply chain descritte in questo libro.

Scott Malcomson, 2016-03-17 This is not your ordinary history of the Internet. Scott Malcomson has brilliantly extended the connections between Silicon Valley and the military back far beyond DARPA back in fact to World War I. If you want to understand the conflict between cyberspace utopians and the states and corporations who seek to dominate our virtual lives, you've got to read this book.

James Ledbetter, editor Inc Magazine: In elegant prose, powered by deep research and with a

surprisingly vivid cast of characters Scott Malcomson shows how profound the relationship is between the state and the Internet As major powers try to assert control over the Web Splinternet illuminates both how we got to this point and how to move forward Parag Khanna global contributor CNN and author of Connectography Mapping the Future of Global Civilization There s always been something universalizing about the Internet The World Wide Web has seemed both inherently singular and global a sort of ethereal United Nations But today as Scott Malcomson contends in this concise brilliant investigation the Internet is cracking apart into discrete groups no longer willing or able to connect The implications of this shift are momentous Malcomson traces the way the Internet has been shaped by government needs since the 19th century above all the demands of the US military and intelligence services From World War I cryptography and spying to weapons targeting against Hitler and then Stalin the monolithic aspect of the digital network was largely determined by its genesis in a single state sponsored institution In the 1960s internationalism and openness were introduced by the tech pioneers of California s counter culture the seed bed for what became Google Microsoft Facebook and Apple But in the last 15 years security concerns of states and the privatizing impetus of e commerce have come to the fore and momentum has shifted in a new direction towards private walled domains each vying with the other in an increasingly fragmented system in effect a Splinternet Because the Internet today surrounds us so comprehensively it s easy to regard the way it functions as a simple given part of the natural order of things Only by stepping back and scrutinizing the evolution of the system can we see the Internet for what it is a contested protean terrain constantly evolving as different forces intervene to drive it forward In that vital exercise Malcomson s elegant erudite account will prove invaluable [Move](#) Parag Khanna,2021-10-07 Where will you live in 2030 Where will your children settle in 2040 What will the map of humanity look like in 2050 Mobility is a recurring feature of human civilisation Now as climate change tips toward full blown crisis economies collapse governments destabilise and technology disrupts we re entering a new age of mass migrations one that will scatter both the dispossessed and the well off Which areas will people abandon and where will they resettle Which countries will accept or reject them As today s world population which includes four billion restless youth votes with their feet what map of human geography will emerge In Move global strategy advisor Parag Khanna provides an illuminating and authoritative vision of the next phase of human civilisation one that is both mobile and sustainable while guiding each of us as we determine our optimal location on humanity s ever changing map **The Future of Humanity** Zhouying Jin,2022-12-23 **Navigating the Polycrisis** Michael J.
