Sensors for Industrial Applications Sorin Fericean, 2018-12-31 This practical guide provides a comprehensive survey of all relevant inductive sensor classes for industrial applications in a single volume, from automotive use to white goods, covering design, fabrication, implementation principles, and functionality, as well as standards and EMC requirements. The book addresses professional engineers and technicians but is also accessible to students who require a solid basic knowledge of inductive sensors. Each chapter begins with classic traditional explanations and gradually moves on to state of the art analog and digital solutions, including large scale integrated systems on chip, software defined sensors, SDS, digital signal synthesis, coils on silicon, and active inductors. The book employs three modern analysis methods: analytic computation, popular graphical methods, phasor diagrams, phase plans, Smith charts, etc., and computer assisted tools like the electromagnetic field simulator Maxwell and the popular Spice simulator for electronic circuits. For traditional solutions, the chapters give overviews in tables with computation formulae, including empirical expressions. Numerical examples help the reader consolidate the theoretical knowledge gained. Concrete examples for currently available commercial parts are provided.

Intelligent Components and Instruments for Control Applications 1997 (SICICA '97) L. Foulloy, 1997 SICICA '97 was the third symposium in the series: 1992 Malaga, Spain; 1994 Budapest, Hungary. It was sponsored by the Technical Committee on Components and Instruments and was organized by the Laboratoire d'Automatique et de Microinformatique Industrielle, Université de Savoie, on behalf of AFCET, the National Member Organization. The symposium was held in the Imperial Palace Congress Center, Annecy. 178 papers were submitted as draft papers and reviewed by the International Program Committee members, who selected 117 papers coming from 25 countries. The topics covered include the evolution of electronic components, especially microcontrollers and digital signal processors, which can be used for the implementation of

instruments where intelligence is located in the processing problems and solutions using fieldbuses for the control of automated processes and the principal phases in the industrialisation of microsystems which associate micromechanics and microelectronics The Symposium showed the vitality of the research in the field of intelligent instruments and components
