Overview

1. The chapter opens with amazing tales of life at the extreme edge. What are the "masters of adaptation"? Describe the one case you thought was most dramatic.

27.1 Structural and functional adaptations contribute to prokaryotic success

2. Which two domains include prokaryotes?
3. Let's focus on some general details about prokaryotes.
 - a. Are they multicellular or unicellular?
 - b. Compare their size relative to eukaryotic cells.
 - c. What three shapes are most common? Draw and label them.
 - d. What is the composition of the typical bacterial cell wall?
4. A key feature of prokaryotic cells is the cell wall. What three functions does it provide for the cell?
5. Quick review! What material comprises the cell wall of plants? Of fungi?
6. The cell walls of archaeans are different. They lack _____ but contain _____ and _____.
7. Explain the difference between gram-positive and gram-negative bacteria.
8. What is a bacterial capsule? What functions may it serve?
9. Many prokaryotes are capable of directional movement. What is this called?
10. What structure makes movement of bacteria possible?
11. What are the small, circular, self-replicating pieces of DNA found in bacteria called?
12. Copy and fill in the chart below.

	Prokaryotes	Eukaryotes
Size		
Genome		
Membranes		
Location of genome		
Plasmids		
Ribosomes		

13. Under ideal conditions, how quickly can *E. coli* divide? What conditions check prokaryotic reproduction?
14. What three key features allow prokaryotic populations to consist of trillions of individuals?
15. Draw and label a typical prokaryotic cell. Be sure to include the cell wall, sex pilus, circular chromosome, nucleoid region, ribosomes, flagella, capsule, and fimbriae. Also, sketch in a plasmid and label it. For each structure, know the function.
16. When conditions for survival are difficult, some species produce endospores. What are these? Can you name any species that form endospores?

27.2 Rapid reproduction, mutation, and genetic recombination promote genetic diversity in prokaryotes

17. You should now have some idea why there is so much potential for genetic diversity with bacterial populations. Although mutation is the major source of genetic variation in prokaryotes, explain each of the following three other sources of variation: (A) recombination, (B) transformation, and (C) transduction.
18. What is horizontal gene transfer? How is it accomplished in bacteria?
19. What is a sex pilus? What is the F factor? How are the two related?
20. The F factor is an episome. This is a piece of DNA that can be integrated within the main chromosome of the bacterium, or able to exist as an independent plasmid. What is the bacterial cell called:
