Range Measurement Applications

Figure 7.1: Industrial range measurement applications

Probably one of the greatest visions of the process industry has been a truly wire-and-rotate non-contact, non-intrusive continuous level measurement instrument, a single technology that can be used in every application, a device that is self-calibrating and maintenance-free, that is easy to install onto any vessel with any process connection. At the same time this device should offer an accuracy to within 1mm, it must be low-cost and capable of paying for itself in under three months while able to operate in excess of 20 years. S.A. Chapter 7 Range Measurement Applications:

Industrial Applications of Laser Remote Sensing Tetsuo Fukuchi, Tatsuo Shiina, 2012 This e book is an essential review of land based laser sensing methods such as differential absorption Raman scattering laser induced fluorescence Doppler effect methods laser induced breakdown spectroscopy and laser ultrasonics and their respective application to specific industrial needs such as natural gas leak detection hydrogen gas leak detection pollutant detection wind profiling for windmill sites minor constituent monitoring and concrete structure health monitoring Readers will gain an updated overview of laser remote sensing techniques and their applications to the industrial environment Load-Pull Techniques with Applications to Power Amplifier Design Fadhel M. Ghannouchi, Mohammad S. Hashmi, 2012-06-06 This first book on load pull systems is intended for readers with a broad knowledge of high frequency transistor device characterization nonlinear and linear microwave measurements RF power amplifiers and transmitters Load Pull Techniques with Applications to Power Amplifier Design fulfills the demands of users designers and researchers both from industry and academia who have felt the need of a book on this topic It presents a comprehensive reference spanning different load pull measurement systems waveform measurement and engineering systems and associated calibration procedures for accurate large signal characterization Besides this book also provides in depth practical considerations required in the realization and usage of load pull and waveform engineering systems In addition it also provides procedure to design application specific load pull setup and includes several case studies where the user can customize architecture of load pull setups to meet any specific measurement requirements Furthermore the materials covered in this book can be part of a full semester graduate course on microwave device characterization and power amplifier design **Beyond the Kalman Filter: Particle Filters for Tracking Applications** Branko Ristic, Sanjeev Arulampalam, Neil Gordon, 2003-12-01 For most tracking applications the Kalman filter is reliable and efficient but it is limited to a relatively restricted class of linear Gaussian problems To solve problems beyond this restricted class particle filters are proving to be dependable methods for stochastic dynamic estimation Packed with 867 equations this cutting edge book introduces the latest advances in particle filter theory discusses their relevance to defense surveillance systems and examines defense related applications of particle filters to nonlinear and non Gaussian problems With this hands on guide you can develop more accurate and reliable nonlinear filter designs and more precisely predict the performance of these designs You can also apply particle filters to tracking a ballistic object detection and tracking of stealthy targets tracking through the blind Doppler zone bi static radar tracking passive ranging bearings only tracking of maneuvering targets range only tracking terrain aided tracking of ground vehicles and group and extended object tracking **Measuring the Performance of the Hollow State** David G. Frederickson, 2006-10-16 Measuring the Performance of the Hollow State is the first in depth look at the influence of performance measurement on the effectiveness of the federal government To do this the authors examine the influence of the Government Performance and Results Act of

1993 with consideration of the later Program Assessment Rating Tool of 2002 on federal performance measurement agency performance and program outcomes They focus a systematic examination on five agencies in the U S Department of Health and Human Services the Food and Drug Administration the Centers for Medicare and Medicaid Services the Health Resources and Services Administration the National Institutes of Health and the Indian Health Service Besides representing a wide range of federal government organizational structures and program formats these agencies offer a diverse array of third party arrangements including states native American tribes scientists medical schools and commercial and nonprofit health care intermediaries and carriers Exploring the development of performance measures in light of widely varying program mandates the authors look at issues that affect the quality of this measurement and particularly the influence of program performance by third parties They consider factors such as goal conflict and ambiguity politics and the critical role of intergovernmental relations in federal program performance and performance measurement Through their findings they offer illumination to two major questions in public management today what are the uses and limitations of performance measurement as a policy and management tool and how does performance measurement work when applied to the management of third party government While scholars and students in public administration and governmental reform will find this book of particular interest it will also be of use to anyone working in the public sector who would like to have a better understanding of performance measurement

Application of LADAR in the Analysis of Aggregate Characteristics Linbing Wang, 2012 NCHRP Project 4 34

Application of LADAR in the Analysis of Aggregate Characteristics was conducted by Virginia Polytechnic Institute and State University Blacksburg Virginia with participation by the University of Illinois at Urbana Champaign The objective of the project was to develop and evaluate a laser detection and ranging LADAR system capable of precise and accurate measurement of the aggregate characteristics of shape volume angularity surface texture specific surface area and volumetric gradation Ideally the final system would be applicable to aggregate in three size categories coarse 2 in to 4 fine 4 to 200 and microfine P200 and suitable for routine use in research central and field laboratories for Portland cement concrete and asphalt concrete mixture design and quality assurance The project which developed new equipment and computer algorithms proved technically challenging The project team developed a prototype Fourier transform interferometry FTI system with fully functional hardware and software The system can characterize aggregate shape angularity texture surface area and volume of a wide range of aggregate sizes with high accuracy Assembly and operation of the FTI system consisting of a chargecoupled device CD camera a fringe source a sample platform and a software package are fully documented in the report The accuracy and precision of the prototype FTI system are comparable to or better than those of other systems now available to automatically measure aggregate characteristics but its current range of aggregate size 3 4 in to 50 is narrower than desired Extending this size range is possible in the future by using a CCD camera with a

larger field of view and increasing the system resolution through appropriate selection of the equipment components
