- Write the Key Ideas and the accompanying bullet points from pages 78 and 79 of the Student Book on sentence strips, changing several words or an entire phrase in each one to make the statements incorrect. Tell students to keep their books closed, and challenge them to correct each sentence strip. To add an element of fun, you could make the review exercise into a competition between teams to see which team can correct all the statements most quickly.

1. B
2. Pioneer species are the first to colonize an area lacking any life, whereas a climax community is a late successional stage of a stable, complex community.
3. The plants and animals that make up each successional stage change the environment slightly in ways that are either beneficial or harmful for other species. For example, early in succession, shade-intolerant trees may quickly sprout and dominate the landscape. But as these grow, the shade they create makes it difficult for new trees of the same species to become established. This sometimes favours shade-tolerant trees, which begin to replace the other species.
4. climax community
5. A
6. poisonous chemicals, such as nicotine, or repellent compounds, such as those found in mustard
7. Predators consume other animals, but prey are consumed by predators. Both predators and prey rely on adaptations such as camouflage to help them survive—camouflage helps predators sneak up on prey, and camouflage helps prey avoid detection.
8. A
9. Factors such as solar energy, wind currents, and precipitation all influence regional climates on large geographical scales. In turn, these factors affect the types of plants that grow in different regions, and the animal communities that live there.
