Advanced Chemical Process Control Morten Hovd,2023-06-06 Advanced Chemical Process Control Bridge the gap between theory and practice with this accessible guide Process control is an area of study which seeks to optimize industrial processes applying different strategies and technologies as required to navigate the variety of processes and their many potential challenges Though the body of chemical process control theory is robust it is only in recent decades that it has been effectively integrated with industrial practice to form a flexible toolkit The need for a guide to this integration of theory and practice has therefore never been more urgent Advanced Chemical Process Control meets this need making advanced chemical process control accessible and useful to chemical engineers with little grounding in the theoretical principles of the subject It provides a basic introduction to the background and mathematics of control theory before turning to the implementation of control principles in industrial contexts The result is a bridge between the insights of control theory and the needs of engineers in plants factories research facilities and beyond Advanced Chemical Process Control readers will also find Detailed overview of Control Performance Monitoring CPM Model Predictive Control MPC and more Discussion of the
