Children Designers Interdisciplinary Constructions For Learning And Knowing Mathematics In A Computer Rich School Cognition And Computing:

Children Designers Idit Harel,1991 In this book the author presents a new vision of learning through design and production and describes computer programming as a source of a learning and design power As means of studying this extended notion of children s programming the author implemented Instructional Software Design Projects to explore the learning that takes place when students develop complete mathematical software products designed for other students in their school The results demonstrate that the young designers learned not only about mathematics fractions and programming Logo but also about design and user interfaces as well as representational pedagogical and communicational issues

Learning Through Problem Solving Cindy E. Hmelo,Susan M. Williams,2014-02-24 The articles in this special issue represent the findings of researchers working in classroom settings to explore key issues in learning through problem solving Although they vary in the domains being studied the age of students and the methods they employ there are numerous common themes that can inform both theory and practice The authors have grappled with the complex task of putting problem based curricula into practice They report here the difficulties they faced the factors contributing to their successes and the lessons they have learned

Miller,2012-10-16 Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can t help but be interested in learning more about why humans think and behave as they do This award winning twelve volume reference covers every aspect of the ever fascinating discipline of psychology and represents the most current knowledge in the field This ten year revision now covers discoveries based in neuroscience clinical psychology s new interest in evidence based practice and mindfulness and new findings in social developmental and forensic psychology

Merging the Instructional Design Process with Learner-Centered Theory Charles M. Reigeluth,Yunjo An,2020-10-19 Merging the Instructional Design Process with Learner Centered Theory brings together the innovations of two previously divided processes learning design strategies theories and instructional systems development into a new introductory textbook Using a holistic rather than fragmented

approach that includes top level mid level and lower level design this book provides guidance for major topics such as non instructional interventions just in time analysis rapid prototype approaches and learner centered project based anytime anywhere instruction Informed by the authors considerable experience and leadership throughout dramatic shifts in today s learning landscape this book offers the next generation of instructional designers a fresh perspective that synthesizes and pushes beyond the basics of design and development **Encyclopedia of Library and Information Science** Allen Kent, Harold Lancour, 1997-09-16 The Biological Literature to An Uncertainty Principle for Information Seeking A Qualitative Approach **Handbook of Psychology, Educational Psychology** William M. K. Hall and Co. Staff, 1993-06 **Knowledge under Construction** Daniel Ness, Stephen J. Farenga, 2007-03-26 Knowledge under Construction investigates how young children develop spatial geometric and scientific thinking skills particularly those associated with architecture Based on original research and analysis of videotapes of children s play with blocks the authors findings suggest that such play is anything but pointless Their conclusions fill in gaps in our current understanding of how children learn to think spatially and scientifically even while challenging portions of that understanding including some of Piaget s thesis about the primacy of topological space in children s learning A system of measurement developed to identify and categorize children s spontaneous behavior at play allows adults to observe patterns of behavior as children play and record the development of process skills and cognitive abilities enhancing our understanding of how children begin to learn about space and architectural relationships The book also examines the educational implications of our enhanced understanding One possible development is a new alternative way to measure cognitive abilities and development in children based on their work with blocks **Constructing Dynamic Triangles Together** Gerry Stahl, 2015-11-19 Rational thinking as exemplified in mathematical cognition is immensely important in the modern world This book documents how a group of three eighth grade girls developed specific group practices typical of such thinking in an online educational experience A longitudinal case study tracks the team through eight hour long sessions following the students meaning making processes through their mutual chat responses preserved in computer logs coordinated with their geometric actions The examination of data focuses on key areas of the team s development its effective team collaboration its productive mathematical discourse its enacted use of dynamic geometry tools and its ability to identify and construct dynamic geometry dependencies This detailed study of group cognition serves as a paradigmatic example of computer

supported collaborative learning incorporating a unique model of human computer interaction analysis applied to the use of innovative educational technology A valuable resource for researchers instructors and students alike it offers concrete suggestions for improving educational practice Beyond Constructivism Richard A. Lesh,Helen M. Doerr,2003-05-01 This book has two primary goals On the level of theory development the book clarifies the nature of an emerging models and modeling perspective about teaching learning and problem solving in mathematics and science education On the level of emphasizing practical problems it clarifies the nature of some of the most important elementary but powerful mathematical or scientific understandings and abilities that Americans are likely to need as foundations for success in the present and future technology based information age Beyond Constructivism Models and Modeling Perspectives on Mathematics Problem Solving Learning and Teaching features an innovative Web site housing online appendices for each chapter designed to supplement the print chapters with digital resources that include example problems relevant research tools and video clips as well as transcripts and other samples of students work <http://tcct.soe.purdue.edu/books/ULandULjournals/models/ULandULmodeling> This is an essential volume for graduate level courses in mathematics and science education cognition and learning and critical and creative thinking as well as a valuable resource for researchers and practitioners in these areas

Children as Software Designers Idit Harel,1990 **Methods and Techniques for Involving Children in the Design of New Technology for Children** Jerry Alan Fails,Mona Leigh Guha,Allison Druin,2013-10 Considers the various roles children have played in the technology design process with a focus on those that integrally involve children throughout the process Summarizes and provides a pragmatic foundation for researchers and practitioners to use several methods and techniques for designing technologies with and for children Building Blocks H.H. Krane, PhD,2017-01-16 In this document we are suggesting that the specialist subject centered curriculum needs to be balanced by an approach that gives priority to every child learning the fundamental strategies of thinking and problem solving We believe this necessitates an explicit thrust as a core area of the educational development of every child through the methodologies and techniques we have defined as an interdisciplinary approach The interdisciplinary nature of thinking is recognized by the inventor as well as the designer as a frame of mind For schools to develop this frame of mind in students requires a truly interdisciplinary approach to learning that complements the traditional subject based intradisciplinary curriculum Certainly there are bodies of knowledge that can be isolated to form specific subjects or disciplines In fact with the explosion of knowledge and information partly due to improved and new modes of communication there are even subjects within subjects However the present age of specialization threatens our childrens education and schools must heed the caution expressed in the Victorian Governments Green Paper and avoid unduly early and narrow specialization into academic and practical streams **Getting and Keeping Children Engaged with a Constructionist Design Tool for Craft and Math** Kristin Kaster Lamberty,2007 Manipulatives of various kinds are used in elementary schools as part of the mathematics curriculum They are recognized for

their affordances for helping children understand abstract ideas by connecting them to concrete objects but not all research about the use of manipulatives has been positive It is sometimes difficult for children to make connections between what they are doing and the ideas the manipulatives embody
